

# FASTRIM®

multi-transition system

Like hardwoods, there are many different types of trim and transition pieces available for laminate floors. Transition strips, end caps, stair nosings, moldings, and baseboard are all available for most finish applications. Some companies also offer floor registers for heating and air vents. To add detail, there are “intarsia,” or inlaid, designs available. These pieces have inlaid patterns that can set off a large field of flooring or be used as a border around the perimeter of the room.

To simplify the final stages of your installation select the FasTrim® Multi-Transition System. This system contains transition pieces that can be combined to form t-molding, hard surface reducer, carpet reducer, end molding, or stair nose. Each transition piece snaps firmly into the included floor track for a snug, solid fit every time. Trim just doesn't get any easier than this.

## coordinating moldings

Coordinating moldings are available for your flooring needs.

### Quarter Round

Dimensions 94 1/16 x 3/4 x 3/4

Trim a variety of conditions. Wall transition is a typical application for this type of trim. Quarter Round is a universal solution for making a rounded corner.

# FIVE SOLUTIONS, ONE EASY SYSTEM

- One SKU = Five Transitions
- Easy Assembly
- Coordinates with all Fausfloor laminate designs

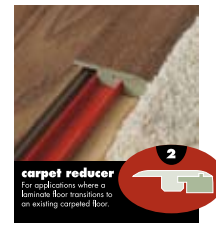

## 1. T-Moldings

T-Moldings are used in doorways and archways four feet wide (1.22m) or less and in rooms that are longer/wider than 66 feet (20m) to join together two different areas of laminate floors with underlayment.

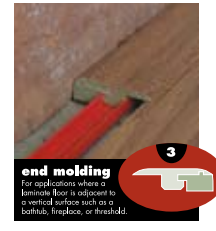

## 2. & 3. Carpet Reducer / End Molding

Carpet Reducer strips are used as a transition between laminate floors with underlayment and carpet floors.

The Carpet Reducer strip can be used as End Molding. End Molding strips are used to finish the floor at door thresholds, sliding glass doors, or other vertical fixed objects.

## 4. Hard Surface Reducer

Hard Surface Reducer is used to transition to a lower hard surface, such as wood or tile. Hard Surface Reducer is used with laminate flooring.

## 5. Stair Nose Moldings

Stair Nose Moldings are used to finish the edges of stair treads or to finish any type of step-down application where laminate flooring with underlayment is installed.
